Felipe FETT

{ FULL STACK SOFTWARE ENGINEER | FRONTEND SPECIALIST & TECH LEAD }

Hello,

I am a Senior Full Stack Software Engineer with **15+ years of experience delivering scalable, high-quality web applications for product-led, remote-first teams**. I specialize in frontend architecture using React, TypeScript and modern design systems, while maintaining strong backend expertise in Node.js and proven technical leadership.

I bring a **frontend-first mindset grounded in full stack pragmatism**, enabling teams to move faster without sacrificing quality, scalability, or maintainability.

Throughout my career, I have worked across fintech, e-commerce, edtech, SaaS and other business environments, contributing both as an individual contributor and as a technical leader. I have led initiatives ranging from component libraries and monorepos to scalable full product platforms, consistently improving code quality, developer experience and delivery velocity.

Beyond hands-on development, I have acted as a technical focal point and mentor, supporting engineers at different seniority levels and collaborating closely with product managers, designers and business stakeholders. In one initiative, targeted technical and UX improvements I led drove **250% user subscription growth in 30 days**, later accelerating to **1000% growth** and repositioning the business on a new trajectory.

I am particularly motivated by roles where I can combine frontend excellence, pragmatic full stack thinking and leadership to deliver measurable business value. I thrive in remote environments that value ownership, clear communication and continuous improvement.

I would welcome the opportunity to contribute my experience and leadership to a team building meaningful products at scale in a remote-first environment.

Thank you for your time and consideration.

Best regards,

Felipe Fett
